

2017 Testing Services & Price List

	INFORMATION	TIME REQUIRED FOR TEST	AMOUNT OF SAMPLE REQUIRED	PRICING																																				
POTENCY TESTING	Check concentration of active(s) in any dosage form: capsules, gels, creams, powders, suppositories, etc. USP <621> & <797>	Results usually in 2-4 days. Please call ahead if you have a RUSH sample or a new API not listed on our API list.	Generally 5 capsules, troches, suppositories or 5ML for liquids / creams, 1GM for powders. These amounts are not always practical, call if in doubt.	\$130 (\$120 each with a verbal commitment for 10 or more per month) Porcine Thyroid: \$180 (Requires 28 hour enzymatic digestion) For multiple active ingredients in the formulation, see our Combination Assays price sheet (attached) for potentially significant savings.																																				
POTENCY OVER TIME	Determine potency for Beyond-Use Dating. Also available, Stability Indicating Assays for FDA approved stability studies. Can be assayed at any interval for any length of time and stored at room, body temp. refrigerated, or frozen. USP <621> & <797>	Results at each testing interval. Lab report is in chart form which adds the new data at each time point.	Multiples of amount required for potency assay, based upon anticipated number of tests over desired time frame.	Same as potency each time it is tested. Contact us for attractive pricing on stability studies involving Stability Indicating Assay as required by the FDA. (Also referred to as "True" Stability Studies)																																				
STERILITY METHOD SUITABILITY	Verify the suitability of the sterility testing method in compliance of USP <797> & <71> Test involves inoculating multiple growth media containing samples with 4 different bacteria, plus mold and yeast to verify growth will occur.	Can take up to 5 days to determine presence of microbe growth	10ML Minimum For pooled samples* the total volume must equal at least 10ML	\$400 This test is run concurrently with sterility testing, which is needed as the control.																																				
STERILITY TESTING	Check for aerobic and anaerobic bacterial contamination in compliance of USP <797> & <71>	14 days as required by the USP We issue a preliminary report after 7 days.	Generally 2-5ML minimum For pooled samples* the total volume must equal at least 2ML	\$100 (\$95 each with a verbal commitment for 10 or more per month)																																				
FUNGI (MOLD/YEAST)	Check specifically for fungi in compliance of USP <797> & <71>. (Note, mold doesn't always show up in the USP sterility test)	14 days as required by the USP	Generally 2ML minimum For pooled samples* the total volume must equal at least 2ML. This should be run in conjunction with a sterility test.	\$60 (\$55 each with a verbal commitment for 10 or more per month)																																				
ENDOTOXIN	Determine presence of bacterial endotoxins in compliance of USP <797> & <85>	Results in 2-3 hours after sample is received.	Generally 2ML minimum For pooled samples* the total volume must equal at least 2ML	\$100 (\$95 each with a verbal commitment for 10 or more per month)																																				
PACKAGE PRICES	<p>Our standard prices are among the most attractive available. These packages are priced to encourage more complete, and more frequent testing for your protection.</p> <table border="0"> <thead> <tr> <th>Test Package</th> <th>Price of Package</th> <th>10 or more of same package per month</th> <th>10 or more Method Suitability tests per month, add \$390 to package price</th> </tr> </thead> <tbody> <tr> <td>A. 2017 Testing Services & Price List

	INFORMATION	TIME REQUIRED FOR TEST	AMOUNT OF SAMPLE REQUIRED	PRICING
STABILITY INDICATING METHOD DEVELOPMENT	Involves forcibly degrading the sample using heat, light, acids, bases, and oxidizing agents and developing a validated method which proves that potential breakdown products will not interfere with the active ingredients during the stability study being requested.	Method development depends on complexity of the sample. This will usually be completed in approximately 3 weeks.	Typically need about 100ML or 100GM of sample. Please contact us to get exact amounts.	Starting \$3,500 per method Price depends upon complexity of formulation. For multiple active ingredients in the formulation, we make every effort to create a single method which will test for all of the actives. (Please note that a \$2,000 deposit is required in advance)
STABILITY STUDY	Following development of the Stability Indicating Method, the Stability Study will periodically test the concentration of active(s) to establish the best BUD. This can be done for any dosage form. USP <621> <797>	Results will be reported as the samples are tested, ±2 days from dates requested. (CIAL is closed on weekends and holidays)	Depends on sample, number of actives in the formulation, and time points requested.	\$180 Per active ingredient, per time point.
ACCELERATED TESTING	Accelerate your testing by a factor of 2 to 3. CIAL has a constant temperature and humidity chamber to help accelerate the testing of your room temperature samples.	Results will be reported as the samples are tested, ±2 days from dates requested. (CIAL is closed on weekends and holidays)	Depends on sample, number of actives in the formulation, and time points requested.	\$220 Per active ingredient, per time point.
PARTICULATES	Determines the number of sub-visible particles in parenterals and ophthalmics, in ranges: ≥10µm, ≥25µm, ≥50µm. USP <788> <789>	Results are usually available within 2-3 days.	A minimum of 1 container (syringe, vial, IV Bag, etc). Quantity of containers needs to be a statistically representative sampling of the lot.	\$100 Per container
pH	Measures the pH of the sample to make sure it falls within desired range for safety and stability. USP <791>	Results are usually available within 2-3 days.	A minimum of 1mL, more is desirable.	\$50 Per test
CONTAINER ENCLOSURE INTEGRITY	Tests the container integrity to determine its ability to keep the medication safe and maintain sterility. This test can also substitute for a sterility <71> test at the end of a stability study.	Results are usually available within 2-3 days.	A minimum of 4 product-filled containers (syringe, vial, pump, jar, etc).	\$150 Per test
APPEARANCE AND ODOR	Describes the sample as received as well as periodically throughout a stability study. This can be used to document the condition of the formulation over time.	Results will be reported as the samples are tested, ±2 days from dates requested (CIAL is closed on weekends and holidays)	A minimum of 5ml or 5gm, more is desirable.	\$50 Per time point
ANTIMICROBIAL EFFECTIVENESS	This extensive six step test utilizes 5 microorganisms specified by the USP to determine if the antimicrobial agent in the formulation is effective in stopping microbial growth. USP <51>	Requires ~30 days to produce results.	A minimum of 55mL is required for the test. If a part of a multi-test study, a minimum of 50ML per each subsequent test.	\$850 Per test
